

Evolis Introduces Securion
Its new printer for highly secure cards

Angers, France - March 14, 2007- Evolis, the European leader in plastic card printers, announces the **Securion**, a one-stop solution for personalizing and laminating cards with full-fledged security.

Securion is equipped with a dual-sided color-printing module and a lamination station. This printer stands as a powerful solution for issuing highly secure badges, at a high throughput (up to 120 cards per hour) and in a single pass.

The **Securion** integrated lamination device applies a transparent or holographic film through a hot roller technology, to cover the whole surface of the card. This process greatly extends the lifespan of any card and insulates it against data misuse.

To prevent forgery, **Securion** provides two levels of security: a logic-based security that requires a password for the printer activation itself, and a physical lock to thwart unauthorized access to films, ribbons and cards in the feeder.

The **Securion** printer is the ideal solution to personalize and durably protect secured badges. It scales to the demanding security requirements from governmental applications, whether for identity cards, identification badges, or driving licenses. **Securion** also complies with corporate security fundamentals, for identification in harbors, airports, hospitals, universities, and in sensitive areas that call for resilience and fraud-proof identification.

*«The Securion printer combines the latest technological innovation in printing and encoding to bring performance, quality and reliability to users. The only printer in its category to come with a two-year warranty, **Securion** sets a new performance/price standard thanks to a very competitive cost per card», says Eric Bouvard, Product Marketing and Project Manager.*

Technical focus

The standard version comes with a full range of advanced features. **Securion** is a flexible solution with optimized network connectivity and outstanding graphical quality. **Securion** provides:

- Printing drivers for Windows™ XP, 2003 and Vista (32 and 64 bits),
- A LCD screen,
- A port monitor,
- A motherboard with 16 MB of RAM and with USB and Ethernet connectivity.

Securion supports and combines multiple encoding options: magnetic ISO and JIS, smart cards encoders, and contactless cards encoders compliant with the ISO 14443 A and ISO B, Mifare, DESFire and HID iCLASS standards.

***Evolis** (Alternext: ALTVO) designs, manufactures and markets a full range of personalization solutions for plastic cards. The Evolis printers offer all features for graphical, magnetic and electrical customization (smart card, including RFID-enabled and contactless cards) of multi-purpose cards (employee badges, student ID cards, bank cards, etc.). Headquartered in Angers, France, Evolis is a global company with offices in Miami (USA) and Singapore. The Company reported EUR 29.0 million (close to USD 36.1 million) in revenue for 2006. Evolis employs 110 professionals and has a worldwide presence spanning 90 countries.*
